--DETAILED DESCRIPTION OF THE INVENTION--

Page 7, line 15, after "capillary 9", please insert

--The transfer member 3 has provided on its surface an annular groove 12 and the diffusion surface is provided with a circular aperture 13 of similar diameter, configured so that the diffusion surface 7 can be snap-fitted into the groove 12, in the manner of a circlip.--

Page 10, please replace the Abstract with the following Abstract:

--ABSTRACT

A device adapted to provide volatile liquid material to an atmosphere, comprising a reservoir containing volatile liquid material, a rod-like transfer member extending therefrom and adapted to transfer liquid from the reservoir, and at least one diffusion surface adapted to receive the liquid from the transfer member and facilitate its evaporation into the atmosphere, the diffusion surface extending essentially laterally from the transfer member and comprising at least one non-integral, non-porous sheet bearing a surface capillarity, which sheet has an extent and a capillarity sufficient to allow an appropriate evaporation. The device is cheap and easy to construct, versatile and diffuses odor without major changes of the odor over time.--
